Product description The book is written by Allen G. Greenfield and contains good explanations of the topic of basic electronics. The concepts covered include components such as resistors, capacitors, transistors and diodes. They also include the basics of circuits and analysis. This text is intended for undergraduate students of electrical and electronics engineering or of physics, as well as beginning or intermediate users of electronic circuits. The book is accompanied by the software used to help learn the topics covered. The book is designed to be used in conjunction with the software sold by the same name, which helps learners understand circuits. This software contains examples of circuits of varying complexity. Examples of circuits include: adding two resistors, cascading a number of resistors, amplifying signals, building an audio amplifier, adding a capacitor to a circuit, and building a programmable radio. A new edition of the book was published in September 2012 with a lower price point. See also Electronic circuit analysis software List of linear integrated circuit applications References Category:Electronics textbooks Category:1979 non-fiction booksQ: CLLocation.distanceFromLocation swift 4 How to convert CLLocation.distanceFromLocation to swift 4? The code I'm using is: let locationManager = CLLocationManager() locationManager.delegate = self locationManager.desiredAccuracy = kCLLocationAccuracyBest locationManager.requestWhenInUseAuthorization() locationManager.startUpdatingLocation() let location = CLLocation(latitude: lat, longitude: lon) let locationDistance = location.distanceFromLocation(location) A: Use this method. locationManager.location?.horizontalAccuracy It will return the distance of your location. Here you go. CLLocationCoordinate2DMake(CLLocationManager.location?.coordinate.latitude, CLLocationManager.location?.coordinate.longitude) Make sure your Permission is granted func locationManager(\_ manager: CLLocationManager, didUpdateLocations locations: [CLLocation]) { guard let location = locations.first else { return } // Use the location.coordinate property to figure out the distance of 82157476af
